Reaction Environment Tuning

Prof. Linsey Seitz

Dr. Jithin George

Dr. Brianna Ruggiero

Yash Deodhar

Mass Transport

Electrolyte Composition

Operating Potential / Current

How do **macroscale** system properties...

...affect **microscale** environment at the catalyst surface...

...which impact **reactor performance** and **product selectivity**?

pH effects on reactor performance

Prof. Linsey Seitz

Dr. Brianna Ruggiero

Experimental Set up:

- Oxygen reduction reaction (ORR) for peroxide production
- Mesoporous carbon black CMK-3 catalyst
- Rotating Ring-Disk electrode
- Iridium oxide local pH sensing

Linear Sweep Voltammetry

pH effects on reactor performance

Prof. Linsey Seitz

Dr. Brianna Ruggiero

Experimental Set up:

- Oxygen reduction reaction (ORR) for peroxide production
- Mesoporous carbon black CMK-3 catalyst
- Rotating Ring-Disk electrode
- Iridium oxide local pH sensing

Linear Sweep Voltammetry

Tafel slope approximation

$$\eta = a + b * \log(j_{\text{disk,kin}})$$

pH effects on reactor performance

Prof. Linsey Seitz

Dr. Brianna Ruggiero

Experimental Set up:

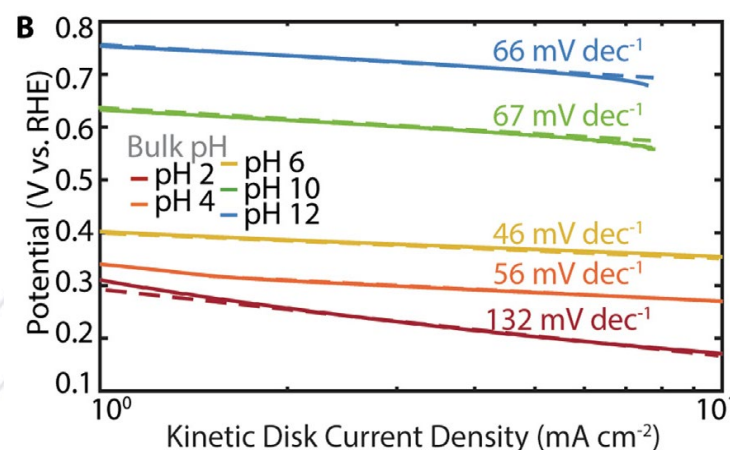

- Oxygen reduction reaction (ORR) for peroxide production
- Mesoporous carbon black CMK-3 catalyst
- Rotating Ring-Disk electrode
- Iridium oxide local pH sensing

Linear Sweep Voltammetry

Tafel slope approximation

$$\eta = a + b * \log(j_{\text{disk,kin}})$$

Local vs bulk pH

pH effects on reactor performance

Prof. Linsey Seitz

Dr. Brianna Ruggiero

Electrocatalytic reactor modeling

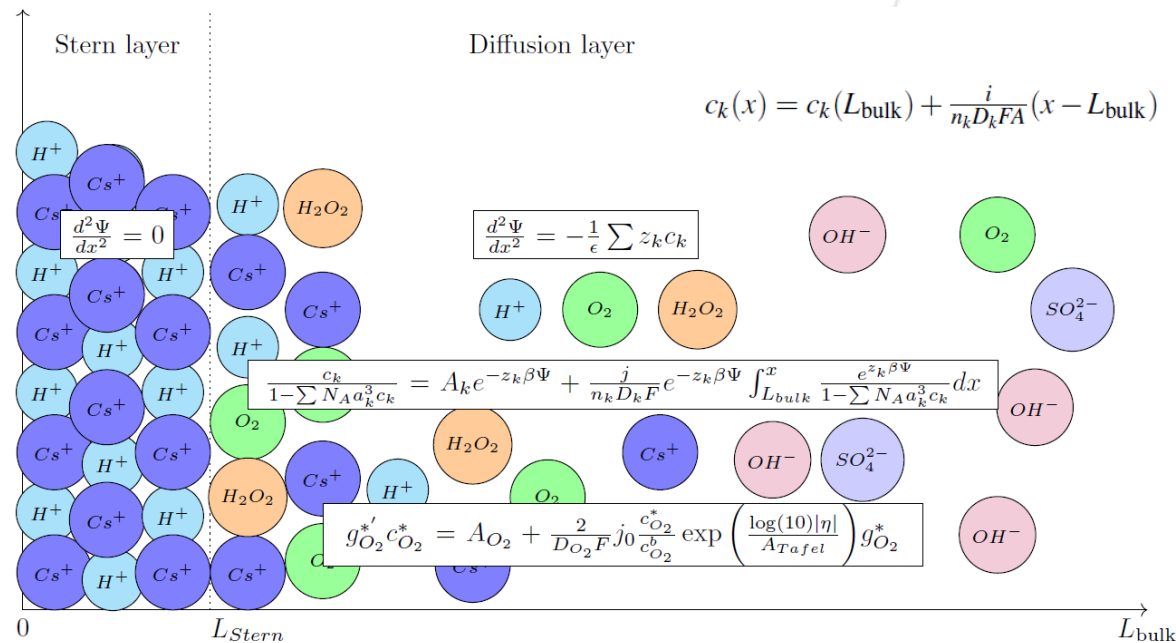

- Solve at steady state $\frac{\partial C}{\partial t} \approx 0$
- Modified Poisson-Boltzmann equation
- Butler-Volmer boundary

Mathematical/Computational analysis

- Solve outer diffusive regime explicitly
- Integrate inward from bulk switch from PDE-> ODE

Mathematical/Computational analysis

- Solve outer diffusive regime explicitly
- Integrate inward from bulk switch from PDE-> ODE

- Nonlinear mapping of space to resolve $\sim\text{nm}$
- Spectral methods for spatial resolution

Current density of H_2O_2 production

- pH 4
- Cs⁺ ions
- Goals:
 - Match behavior in experiment
 - Disambiguate steric interactions, transport, and reaction kinetic effects

Varying length of diffusive region

- Sets transport (diffusion) limited current density
- decrease in current at higher voltage

Varying kinetic reaction rate as Tafel slope

$$J(0) = j_0 \frac{C_i(0)}{C_i^*} \exp \left[-\frac{(\phi - \phi_{eq})}{A_{Tafel}} \right]$$

- Effects both slope after onset potential
- and decrease in current at higher voltage

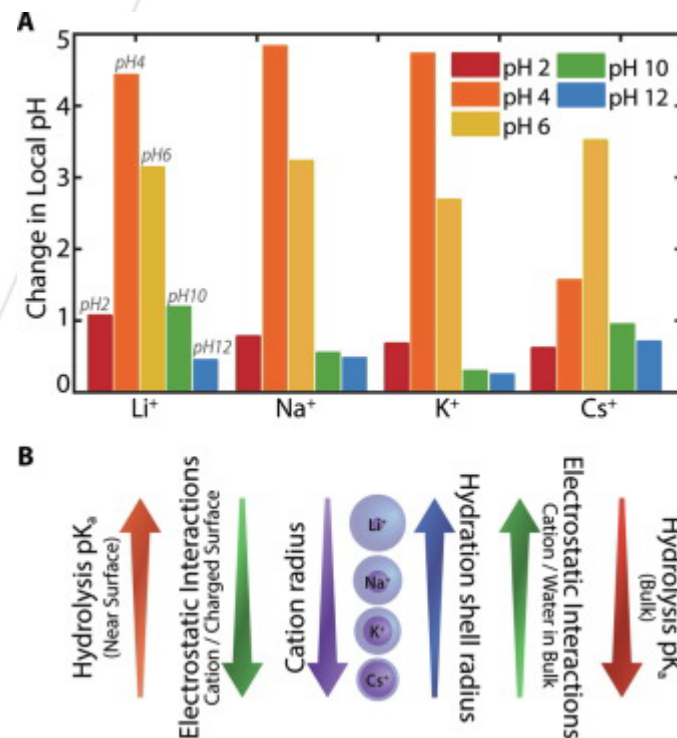

Varying effective radius of ions

$$J(x) = D_i \frac{\partial C_i}{\partial z} + \frac{z_i D_i C_i F}{RT} \frac{\partial \phi}{\partial z} + D_i C_i \frac{N_A \sum_i (a_i^3 \frac{\partial C_i}{\partial z})}{1 - N_A \sum_i (a_i^3 C_i)}$$

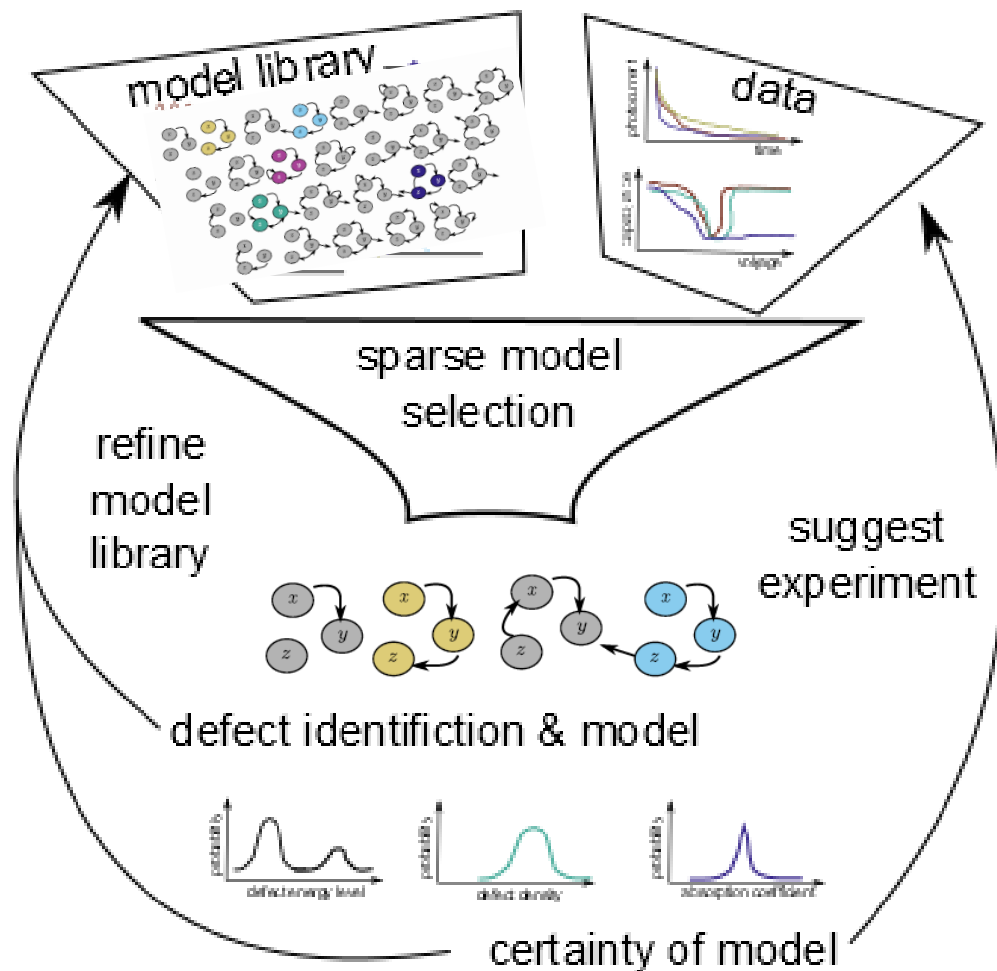

- Larger ions block current due to steric exclusion
- Onset further left.

Next steps over more conditions:

- Fit data to curves to determine most likely parameter set(s)
- Study across different ions and pH

Mathematical methods for ChemBio

- Spatial modeling of electrochemical catalysis
- **Data-driven discovery of dynamical systems**
