

# How a failed continuation step recovers

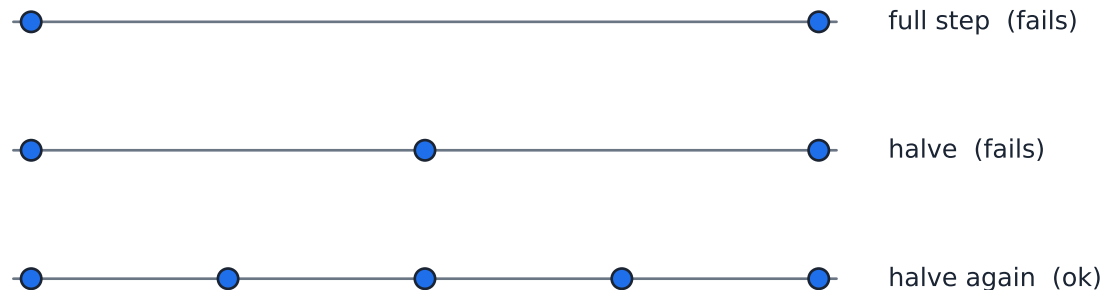

## 1 · failed rung → geometric-midpoint retry

step too big in log-space?  
halve it (geometric midpoint), then go on

## 2 · cliff: recursively halve the voltage step

warm-walk: 8 substeps  $\times$  depth-5 (up to 32 $\times$  refine)

*each sub-step warm-started  $\rightarrow$  walks across the near-discontinuity*
